### **Solu-Cal Enhanced Calcitic Lime awarded Organic Certification**

**WEST WAREHAM** - Solu-Cal USA has received OMRI® Listing for its flagship product, Solu-Cal Enhanced Calcitic Lime. Granted by the Organic Materials Review Institute, OMRI® Listing is granted only for products that meet the criteria for use in certified organic production. OMRI® Listed products undergo a rigorous review to ensure that they comply with organic standards. The OMRI® review verifies product credibility and allows customers to confidently choose products for organic production. Solu-Cal joins an elite group of products included in the OMRI® Listing and held to the highest standards in organic accountability.

The Organic Materials Review Institute (OMRI) supports organic integrity by providing organic certifiers, growers, manufacturers, and suppliers an independent review of products intended for use in certified organic production, handling, and processing. Solu-Cal Enhanced Calcitic Lime is included in the Crop Fertilizers and Soil Amendments Classification and Calcium Carbonate category.

Solu-Cal Enhanced Calcitic Lime is the premier brand of calcium-enriched lime for quick and efficient soil adjustment. Solu-Cal works rapidly to adjust soil pH in as little as 6 to 8 weeks. The use of patented PHCA Organic Humic/Fulvic Acid Technology in Solu-Cal significantly increases the availability of applied and stored nutrients in the soil. Proven to be 75% more effective than traditional pelleted lime, one 50-pound bag of Solu-Cal Enhanced Calcitic Lime is equally as effective as four 50-pound bags of standard lime. In addition, Solu-Cal Enhanced Calcitic Lime is treated with a coating that results in significantly less dust during application than untreated pelletized products. The new OMRI® Listing for Solu-Cal ensures that organic growers can now choose a superior Calcitic lime product for turf and agricultural applications.
